

High Security Portable Fence Systems  
& HVM Barriers

## Crowd Barrier

ARX Crowd Barriers (*also known as pit barriers and stage barriers*) are used for crowd control and are important to help ensure health and safety compliance at stadiums, arenas and festivals.

ARX 12' (3.65m) Crowd Barrier rear view

ARX 12' (3.65m) Crowd Barrier front view

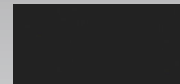

ARX Crowd Barrier front view

### Finishes

Raw Aluminium

Powder Coated  
Aluminium

**The barriers can sit between the stage and the crowd, providing a safe area for security and medical personnel to work and to prevent the crowd from getting injured.**

The modules are sectional and fold flat for ease of transportation and storage.

## Components & Build

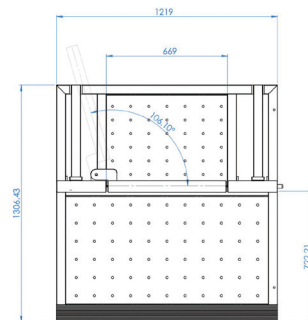

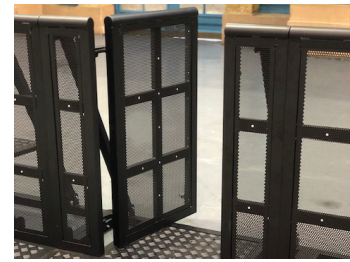

A range of ARX Crowd Barriers are available in 1.2m straight, corner and gated modules.

**1.2m Straight Module**

**Corner Module**

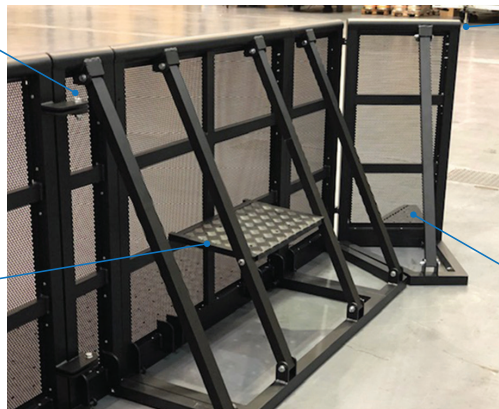

**Gated Module**

### Connecting Modules

Once erected, the vertical barrier is secured upright with stainless steel indexing plungers situated on either side. The units are secured to each other via 6 industry standard Roto or Dual Locks (Coffin Locks) whereby the eccentric cam action progressively draws and positively locks the units together.

### Safety Step

An integral safety step also locks into position on the secure side of the barrier for security or safety staff to better monitor and assist crowd activity.

### Rounded Top Bar

The rounded aluminium top bar ensures no sharp corners are in use for safety and the "finger trap" issue that is common on other systems between the units when connected is eliminated.

### Anti-trip Base Plate

The "crowd side" base plate is manufactured using an aluminium chequer plate construction with an extruded aluminium front ramp for anti-trip access to the product.

## Main Features & Benefits

- All-aluminium construction
- Internal step to aid removal of crowd members
- Roto/Dual Secure Locking System
- 1.2m Straight lengths, corners and gate module available
- Quick and easy to connect
- Easy and lightweight to lift and transport
- Fully reconfigurable into different sizes and layouts
- Manufactured in the UK at our 23,000 square foot production facility
- Raw aluminium or powder coated finishes available
- Rounded top section so as not to injure crowd members
